INTRODUCTION

The use of the Census Enrollment Excel spreadsheet provides a tool to give Health Net enrollment information for new groups. Health Net's Membership Eligibility database is interfaced directly from the incoming data file. This eliminates the need for employers to submit paper forms to Health Net's Membership Eligibility and Accounting Department for new group enrollments.

PARTICIPATION

All small group employers may submit their membership data through the completion of the Census Enrollment spreadsheet.

By use of enrolling via Census Enrollment, the Employer agrees that all data has been validated as this process does not verify or validate the applicant data.

OBJECTIVES AND BENEFITS

The objective of the Census Enrollment spreadsheet is to streamline the enrollment process.

The Census Enrollment spreadsheet is a process by which the eligibility data is provided electronically in fixed fields to Health Net and then loaded directly into our system. This has the following advantages:

- Eliminates excess paperwork.
- Eligibility can be loaded directly into our system with minimal (if any) manual interference.
- Processing time is shorter; therefore, ID Cards are generated quicker.
- Manual entry errors are eliminated.

RECORD RETENTION

Since the eligibility forms are not being physically forwarded to Health Net for retention, the trading partner agrees to maintain the signed Enrollment Form for verification purposes. The signed enrollment documents to be retained must be Health Net's Enrollment Form. In addition, the Enrollment Form must be executed prior to the delivery of the Census Enrollment file of that member(s)' data to Health Net, and includes the Acceptance of Coverage section. The trading partner also agrees to supply Health Net with a copy of the signed enrollment form upon request. **If the arbitration agreement clause on the enrollment form is not signed or is modified in any way, the enrollment data must not be sent to Health Net for those members.**

AUDIT RIGHTS

Health Net reserves the right to conduct periodic audits on the data received against the Enrollment Forms retained by the Employer and/or Broker.

DATA TRANSMISSION

The Census Enrollment spreadsheet must be sent to Health Net Underwriting or Sales Department via encrypted email.

HEALTH NET'S DETAILED DATA SPECIFICATIONS

The following pages provide specifications for every data element used within Health Net's Census Enrollment layout. The data element definitions are designed to provide characteristics for each field. Please review the following general rules of Health Net's standard layout:

1. File is to be used to support new enrollments only. Plan changes or add/deletions should not be on this spreadsheet.
2. Health Net's standard layout does not allow multiple records for the same member. Only one record should be passed for each member in the contract, which should be the current status of the member. Passing more than one record per member will produce inaccurate results.
3. Only Health Net members should be reported on the file (not those of other carriers).
4. For data elements that will not be transmitted to Health Net by your group, the element should be space filled. Please **do not** populate the data elements with fillers such as "0's" or "9's".
5. The Member Type used to identify the employee and each family member should be reported in the following sequence under each SSN: **Member, Spouse or Partner, Dependent**.
6. Health cannot support effective date corrections via this process. Corrections to Coverage Begin and Coverage End dates must be reported to the Health Net eligibility representative via an alternative method.
7. Group Number assignment will be populated by Health Net.
