Clinical Policy: Disc Decompression Procedures

Description
Microdiscectomy or open discectomy (MD/OD) are the standard procedures for symptomatic lumbar disc herniation and they involve removal of the portion of the intervertebral disc compressing the nerve root or spinal cord (or both) with or without the aid of a headlight loupe or microscope magnification. Potential advantages of newer minimally invasive discectomy (MID) procedures over standard MD/OD include less blood loss, less postoperative pain, shorter hospitalization and earlier return to work.

Policy/Criteria
I. It is the policy of health plans affiliated with Centene Corporation® that open discectomy and microdiscectomy are **medically necessary** when meeting all of the following:
   A. Age ≥ 18 years;
   B. Diagnosis of herniated lumbar disc;
   C. Nerve root compression confirmed by imaging and one of the following:
      1. Unilateral radiculopathy with motor deficit and one of the following:
         a. Severe weakness in a nerve root distribution, as evidenced by: a score of <3 on the Medical Research Council 0 to 5 muscle strength scale, or the inability to ambulate;
         b. Mild to moderate weakness in a nerve root distribution, as evidenced by a score of 3 or 4 on the Medical Research Council 0 to 5 muscle strength scale and one of the following:
            i. Worsening weakness or motor deficit;
            ii. Patient has failed to respond to conservative therapy including all of the following:
               a) ≥ 6 weeks physical therapy or prescribed home exercise program;
               b) Nonsteroidal anti-inflammatory drug (NSAID) or acetaminophen ≥ 3 weeks unless contraindicated or not tolerated;
               c) ≥ 6 weeks activity modification;
      2. Unilateral radiculopathy with sensory deficit as evidenced by pain, parasthesias or numbness in a nerve root distribution and patient has failed to respond to conservative therapy including all the following:
         a. ≥ 6 weeks physical therapy or prescribed home exercise program;
         b. NSAID or acetaminophen ≥ 3 weeks unless contraindicated or not tolerated;
         c. ≥ 6 weeks activity modification.

II. It is the policy of health plans affiliated with Centene Corporation that the following minimally invasive procedures for spinal decompression have not been proven superior to other existing technologies:
   A. Percutaneous Lumbar Discectomy (manual or automated [APLD] and/or MILD);
   B. Percutaneous Laser Discectomy (PLD);
CLINICAL POLICY

Disc Decompression Procedures

C. Laser-assisted Disc Decompression (LADD);
D. Percutaneous laser disc decompression (PLDD);
E. Percutaneous nucleotomy;
F. Percutaneous endoscopic discectomy;
G. Endoscopic laser percutaneous discectomy or LASE;
H. Endoscopic Spinal Surgery System;
I. Interspinous/interlaminar process stabilization/spacer device.

Background

A variety of discectomy techniques are available:

- The traditional OD is performed with a standard surgical incision, often with the aid of eyepiece (loupe) magnification. It frequently involves a laminectomy (removal of the vertebral lamina to relieve pressure on nerve roots).
- MD is a refinement of open discectomy and involves a smaller incision in the back, with visualization through an operating microscope; this may include a laminotomy or hemilaminectomy in order to adequately visualize the disc, followed by removal of the disc fragment compressing the affected nerve or nerves.
- MID techniques include percutaneous manual nucleotomy, automated percutaneous lumbar discectomy, laser discectomy, endoscopic discectomy, microendoscopic discectomy, coblation nucleoplasty, and the disc DeKompressor. Tubular or trochar discectomy is a less invasive technique in which a tubular retractor is inserted over a guidewire, gaining access to the disc by muscle splitting rather than muscle incision and detachment.

MID procedures involve smaller incisions and surgery with the aid of indirect visualization; some techniques employ lasers to vaporize parts of the disc or automated techniques for removing portions of the disc. They have the potential advantage of quicker recovery from surgery compared to standard OD or MD.

A systematic review of MID versus MD/OD for symptomatic lumbar disc herniation found MID may be inferior in terms of relief of leg pain, low back pain and re-hospitalization. Additionally, MID may be associated with lower risk of infection and shorter hospital stay, but more research is needed due to inconsistent evidence.

Evaniew and colleagues came to a similar conclusion in their 2014 systematic review of MID versus open surgery for cervical and lumbar discectomy. They state that moderate-quality evidence suggests no advantage of MID in short- and long-term function, and low-quality evidence shows no advantage in short- and long-term pain. At this time the risks due to the more technically complicated MID and potential for inadequate decompression render more conventional spinal decompression procedures the preferred choice.

Chou echoes the findings of the systematic reviews, stating that definitive evidence of advantages of MID techniques is needed before adopting them over OD or MD.

The National Institute for Health and Clinical Excellence (NICE)
Clinical Policy

Disc Decompression Procedures

Current evidence suggests that there are no major safety concerns associated with automated percutaneous mechanical lumbar discectomy. There is limited evidence of efficacy based on uncontrolled case series of heterogeneous groups of patients, but evidence from small randomized controlled trials shows conflicting results. In view of the uncertainties about the efficacy of the procedure, it should not be used without special arrangements for consent and for audit or research.

Coding Implications

This clinical policy references Current Procedural Terminology (CPT®). CPT® is a registered trademark of the American Medical Association. All CPT codes and descriptions are copyrighted 2021, American Medical Association. All rights reserved. CPT codes and CPT descriptions are from the current manuals and those included herein are not intended to be all-inclusive and are included for informational purposes only. Codes referenced in this clinical policy are for informational purposes only. Inclusion or exclusion of any codes does not guarantee coverage. Providers should reference the most up-to-date sources of professional coding guidance prior to the submission of claims for reimbursement of covered services.

CPT Codes That Support Coverage Criteria

<table>
<thead>
<tr>
<th>CPT® Codes</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>62287*</td>
<td>Decompression procedure, percutaneous, of nucleus pulposus of intervertebral disc, any method utilizing needle based technique to remove disc material under fluoroscopic imaging or other form of indirect visualization, with discography and/or epidural injection(s) at the treated level(s), when performed, single or multiple levels, lumbar</td>
</tr>
</tbody>
</table>

* Important Note: This code encompasses various disc procedures, not all of which are considered medically necessary by Centene. To determine medical necessity, the actual procedure to be performed must be specified.

CPT Codes That Do Not Support Coverage Criteria

<table>
<thead>
<tr>
<th>CPT® Codes</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0275T</td>
<td>Percutaneous laminotomy/laminectomy (interlaminar approach) for decompression of neural elements, (with or without ligamentous resection, discectomy, facetectomy and/or foraminotomy), any method, under indirect image guidance (eg, fluoroscopic, CT), single or multiple levels, unilateral or bilateral; lumbar</td>
</tr>
<tr>
<td>22867</td>
<td>Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level</td>
</tr>
<tr>
<td>22868</td>
<td>Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; second level. (List separately in addition to code for primary procedure)</td>
</tr>
<tr>
<td>22869</td>
<td>Insertion of interlaminar/interspinous process stabilization/distraction device, without open decompression or fusion, including image guidance when performed, lumbar; single level</td>
</tr>

</tbody>
</table>

### Reviews, Revisions, and Approvals

- **Policy split from CP.MP.63 Pain Management Procedures.**
- Clarified that open discectomy and microdiscectomy are medically necessary, while minimally invasive discectomy procedures are not.
- Added criteria for open/microdiscectomy.
- Added background information, CPT, and ICD-10 codes.
- Added NICE guidance regarding automated percutaneous mechanical lumbar discectomy. Updated CPT codes. Reviewed and updated references.

CLINICAL POLICY
Disc Decompression Procedures

Important Reminder
This clinical policy has been developed by appropriately experienced and licensed health care professionals based on a review and consideration of currently available generally accepted standards of medical practice; peer-reviewed medical literature; government agency/program approval status; evidence-based guidelines and positions of leading national health professional organizations; views of physicians practicing in relevant clinical areas affected by this clinical policy; and other available clinical information. The Health Plan makes no representations and accepts no liability with respect to the content of any external information used or relied upon in developing this clinical policy. This clinical policy is consistent with standards of medical practice current at the time that this clinical policy was approved. “Health Plan” means a health plan that has adopted this clinical policy and that is operated or administered, in whole or in part, by Centene Management Company, LLC, or any of such health plan’s affiliates, as applicable.

The purpose of this clinical policy is to provide a guide to medical necessity, which is a component of the guidelines used to assist in making coverage decisions and administering benefits. It does not constitute a contract or guarantee regarding payment or results. Coverage decisions and the administration of benefits are subject to all terms, conditions, exclusions and limitations of the coverage documents (e.g., evidence of coverage, certificate of coverage, policy, contract of insurance, etc.), as well as to state and federal requirements and applicable Health Plan-level administrative policies and procedures.

This clinical policy is effective as of the date determined by the Health Plan. The date of posting may not be the effective date of this clinical policy. This clinical policy may be subject to applicable legal and regulatory requirements relating to provider notification. If there is a discrepancy between the effective date of this clinical policy and any applicable legal or regulatory requirement, the requirements of law and regulation shall govern. The Health Plan retains the right to change, amend or withdraw this clinical policy, and additional clinical policies may be developed and adopted as needed, at any time.

This clinical policy does not constitute medical advice, medical treatment or medical care. It is not intended to dictate to providers how to practice medicine. Providers are expected to exercise professional medical judgment in providing the most appropriate care, and are solely responsible for the medical
advice and treatment of members/enrollees. This clinical policy is not intended to recommend treatment for members/enrollees. Members/enrollees should consult with their treating physician in connection with diagnosis and treatment decisions.

Providers referred to in this clinical policy are independent contractors who exercise independent judgment and over whom the Health Plan has no control or right of control. Providers are not agents or employees of the Health Plan.

This clinical policy is the property of the Health Plan. Unauthorized copying, use, and distribution of this clinical policy or any information contained herein are strictly prohibited. Providers, members/enrollees and their representatives are bound to the terms and conditions expressed herein through the terms of their contracts. Where no such contract exists, providers, members/enrollees and their representatives agree to be bound by such terms and conditions by providing services to members/enrollees and/or submitting claims for payment for such services.

Note: For Medicaid members/enrollees, when state Medicaid coverage provisions conflict with the coverage provisions in this clinical policy, state Medicaid coverage provisions take precedence. Please refer to the state Medicaid manual for any coverage provisions pertaining to this clinical policy.

Note: For Medicare members/enrollees, to ensure consistency with the Medicare National Coverage Determinations (NCD) and Local Coverage Determinations (LCD), all applicable NCDs, LCDs and Medicare Coverage Articles should be reviewed prior to applying the criteria set forth in this clinical policy. Refer to the CMS website at http://www.cms.gov for additional information.
