Clinical Policy: Heart-Lung Transplant
Reference Number: CP.MP.132
Date of Last Revision: 02/23

See Important Reminder at the end of this policy for important regulatory and legal information.

Description
Heart-lung transplantation is the treatment of choice for patients with both end-stage heart and end-stage lung disease. This policy establishes the medical necessity requirements for heart-lung transplants.

Policy/Criteria
I. It is the policy of health plans affiliated with Centene Corporation® that heart-lung transplant is medically necessary for members/enrollees who meet all of the following guidelines:
   A. End-stage heart and end-stage lung disease due to one of the following:
      1. Age > 18 years and any of the following:
         a. Irreversible primary pulmonary hypertension with heart failure;
         b. Nonspecific severe pulmonary fibrosis;
         c. Eisenmenger complex with irreversible pulmonary hypertension and heart failure;
         d. Cystic fibrosis with severe heart failure;
         e. Chronic obstructive pulmonary disease with heart failure;
         f. Emphysema with severe heart failure;
         g. Pulmonary fibrosis with uncontrollable pulmonary hypertension or heart failure;
         h. Non-complex congenital heart disease associated with pulmonary hypertension that is not amenable to lung transplantation and repair by standard surgery;
         i. Severe coronary artery disease or cardiomyopathy with irreversible pulmonary hypertension;
      2. Age ≤ 18 years and any of the following:
         a. Eisenmenger syndrome;
         b. Heart re-transplant;
         c. Lung re-transplant;
         d. Alveolar proteinosis;
         e. Primary pulmonary hypertension;
         f. Pulmonary vascular disease;
         g. Restrictive cardiomyopathy;
         h. Congenital heart disease meeting one of the following:
            i. Congenital heart disease lesion that has been previously repaired or palliated;
            ii. Member/enrollee is an infant with a single functional ventricle and one of the following:
               a) Severe stenosis (stenoses) or atresia in proximal coronary arteries;
               b) Moderate to severe stenosis and/or insufficiency of the atrioventricular and/or systemic semilunar valve(s);
               c) Severe ventricular dysfunction;
         i. Cystic fibrosis with progressive, irreversible cardiac dysfunction;
         j. Dilated cardiomyopathy;
   B. Meets the following disease severity criteria:
1. Meets one of the following staging criteria:
   a. Age > 18 years: New York Heart Association classification of heart failure III or IV (Table 1);
   b. Age ≤ 18 years: American Heart Association Stage C or Stage D heart disease, (Table 2);
2. Life expectancy in the absence of cardiopulmonary disease ≥ two years;
C. Does not have any of the following contraindications:
   1. HIV infection with detectable viral load;
   2. Inability to adhere to the regimen necessary to preserve the transplant, even with caregiver support;
   3. Severe hypoplasia of the central branch pulmonary arteries or pulmonary veins;
   4. Current episode of ongoing acute allograft rejection, even in the presence of graft vasculopathy, and retransplantation is requested;
   5. Less than 6 months have passed since the primary transplantation and retransplantation is requested;
   6. Malignancy with high risk of recurrence or death related to cancer;
   7. Acute renal failure with rising creatinine or on dialysis and low likelihood of recovery;
   8. Acute liver failure or cirrhosis with portal hypertension or synthetic dysfunction;
   9. Stroke, acute coronary syndrome, or myocardial infarction (excluding demand ischemia) within 30 days;
   10. Glomerular filtration rate < 40 mL/min/1.73m², unless being considered for multi-organ transplant;
   11. Septic shock;
   12. Active extrapulmonary or disseminated infection;
   13. Active tuberculosis infection;
   14. Progressive cognitive impairment;
   15. Other severe, uncontrolled medical condition expected to limit survival after transplant;
   16. Active substance use or dependence (including current tobacco use, vaping, marijuana use (unless prescribed by a licensed practitioner), or intravenous drug use) without convincing evidence of risk reduction behaviors (unless urgent transplant timelines are present, in which case a commitment to reducing behaviors is acceptable). Serial blood and urine testing may be used to verify abstinence from substances that are of concern;
      a. If there is a history of nicotine or tobacco use, documentation notes abstinence from all tobacco and nicotine products (including nicotine replacement therapy) for ≥ six months prior to transplant;
   17. Active peptic ulcer disease;
   18. Lung transplantation alone will restore right ventricular function.

*Note: Heart lung transplantations may be considered medically necessary for other congenital cardiopulmonary anomalies as determined upon individual case review.

Background
Heart-lung transplantation is a strong surgical option for selected patients with simultaneous end-stage heart failure and end-stage lung disease. Complex congenital heart disease with Eisenmenger syndrome is the most common indication for heart-lung transplantation, with other common indications to include primary pulmonary hypertension and cystic fibrosis. The frequency of heart-lung transplantation is limited due to the number of suitable donors, while the need for heart-lung transplantation has declined due to the availability of new medical therapies.4

Contraindications for combined heart-lung transplantation are similar to those for isolated heart and lung transplantation.4 The International Society for Heart Lung Transplantation (ISHLT) provides listing criteria and best practice recommendations for heart-lung transplants.1,10

According to the 2019 ISHLT registry report, survival rates in adult patients who underwent heart-lung transplantation has steadily improved with an overall median survival rate of 3.7 years from 1992 through 2001 to 6.5 years from 2010 through 2017. This is comparable to primary lung transplantation but is inferior to the median survival rate of heart transplantation alone.4

Coding Implications
This clinical policy references Current Procedural Terminology (CPT®). CPT® is a registered trademark of the American Medical Association. All CPT codes and descriptions are copyrighted

<td>References reviewed and updated. Clarified I.A.2.j, to state “Cystic fibrosis with progressive, irreversible cardiac dysfunction.” Removed the following contraindications: Severe, irreversible, fixed elevation of pulmonary vascular resistance; and Uncorrected atherosclerotic disease with suspected or confirmed end-organ ischemia or dysfunction and/or coronary artery disease not amenable to revascularization. Edited malignancy contraindication to not specify within 2 years, and added exceptions early-stage prostate cancer, cancer that has been completely resected, or that has been treated and poses acceptable future risk.</td>
<td>04/21 04/21</td>
</tr>
</tbody>
</table>

References reviewed and updated. Replaced all instances of “member” with “member/enrollee.”
In B.2., removed “adequate functional status with the ability for rehabilitation.” Replaced contraindications of “history of psychological, behavioral, or cognitive disorders, poor family support structures, or documented noncompliance with previous therapies that could interfere with successful performance of care regimens after transplantation” and “current non-adherence to medical therapy…” with “Inability to adhere to the regimen necessary to preserve the transplant, even with caregiver support.” Changed “Review Date” in policy header to “Date of Last Revision,” and “Date” in the revision log header to “Revision Date.”

Added specific congenital heart disease criteria to 2.i. Removed contraindication regarding specific congenital heart disease lesion.

Annual review completed. Removed pediatric indication of Alpha-1 antitrypsin deficiency. Added “Lung transplantation alone will restore right ventricular function” to I.C. Updated I.C.10. to include “unless being considered for multi-organ transplant”. Criteria I.C.16. updated to exclude marijuana use when prescribed by a licensed practitioner and include required commitment to reducing substance use behaviors if urgent transplant timelines are present. ICD-10 diagnosis code table removed. Minor rewording with no clinical significance. References reviewed and updated. External specialists reviewed.

Important Reminder
This clinical policy has been developed by appropriately experienced and licensed health care professionals based on a review and consideration of currently available generally accepted standards of medical practice; peer-reviewed medical literature; government agency/program approval status; evidence-based guidelines and positions of leading national health professional organizations; views of physicians practicing in relevant clinical areas affected by this clinical policy; and other available clinical information. The Health Plan makes no representations and accepts no liability with respect to the content of any external information used or relied upon in developing this clinical policy. This clinical policy is consistent with standards of medical practice current at the time that this clinical policy was approved. “Health Plan” means a health
plan that has adopted this clinical policy and that is operated or administered, in whole or in part, by Centene Management Company, LLC, or any of such health plan’s affiliates, as applicable.

The purpose of this clinical policy is to provide a guide to medical necessity, which is a component of the guidelines used to assist in making coverage decisions and administering benefits. It does not constitute a contract or guarantee regarding payment or results. Coverage decisions and the administration of benefits are subject to all terms, conditions, exclusions and limitations of the coverage documents (e.g., evidence of coverage, certificate of coverage, policy, contract of insurance, etc.), as well as to state and federal requirements and applicable Health Plan-level administrative policies and procedures.

This clinical policy is effective as of the date determined by the Health Plan. The date of posting may not be the effective date of this clinical policy. This clinical policy may be subject to applicable legal and regulatory requirements relating to provider notification. If there is a discrepancy between the effective date of this clinical policy and any applicable legal or regulatory requirement, the requirements of law and regulation shall govern. The Health Plan retains the right to change, amend or withdraw this clinical policy, and additional clinical policies may be developed and adopted as needed, at any time.

This clinical policy does not constitute medical advice, medical treatment or medical care. It is not intended to dictate to providers how to practice medicine. Providers are expected to exercise professional medical judgment in providing the most appropriate care, and are solely responsible for the medical advice and treatment of members/enrollees. This clinical policy is not intended to recommend treatment for members/enrollees. Members/enrollees should consult with their treating physician in connection with diagnosis and treatment decisions.

Providers referred to in this clinical policy are independent contractors who exercise independent judgment and over whom the Health Plan has no control or right of control. Providers are not agents or employees of the Health Plan.

This clinical policy is the property of the Health Plan. Unauthorized copying, use, and distribution of this clinical policy or any information contained herein are strictly prohibited. Providers, members/enrollees and their representatives are bound to the terms and conditions expressed herein through the terms of their contracts. Where no such contract exists, providers, members/enrollees and their representatives agree to be bound by such terms and conditions by providing services to members/enrollees and/or submitting claims for payment for such services.

Note: For Medicaid members/enrollees, when state Medicaid coverage provisions conflict with the coverage provisions in this clinical policy, state Medicaid coverage provisions take precedence. Please refer to the state Medicaid manual for any coverage provisions pertaining to this clinical policy.

Note: For Medicare members/enrollees, to ensure consistency with the Medicare National Coverage Determinations (NCD) and Local Coverage Determinations (LCD), all applicable NCDs, LCDs, and Medicare Coverage Articles should be reviewed prior to applying the criteria.
