Clinical Policy: Lung Transplantation

Description
Medical necessity criteria for the review of lung transplantation requests.

Policy/Criteria

I. It is the policy of health plans affiliated with Centene Corporation® that lung transplant for members/enrollees with chronic, end-stage lung disease who have failed maximal medical therapy is **medically necessary** when all of the following criteria are met:

A. High (> 50%) risk of death from lung disease within 2 years if lung transplantation is not performed.

B. High (> 80%) likelihood of surviving at least 90 days after lung transplantation.

C. High (> 80%) likelihood of 5-year post-transplant survival from a general medical perspective provided that there is adequate graft function.

D. Does not have ANY of the following absolute contraindications:
   1. Malignancy, except for non-melanoma localized skin cancer that has been treated appropriately, low grade prostate cancer, a malignancy that has been completely resected, or a treated malignancy determined to have a small likelihood of recurrence and acceptable future risks;
   2. Untreatable significant dysfunction of another major organ system unless combined organ transplantation can be performed;
   3. Uncorrected atherosclerotic disease with suspected or confirmed end-organ ischemia or dysfunction and/or coronary artery disease not amenable to revascularization;
   4. Acute medical instability, including, but not limited to, acute sepsis, acute respiratory infection, myocardial infarction, and liver failure;
   5. Uncorrectable bleeding diathesis;
   6. Chronic infection with highly virulent and/or resistant microbes that are poorly controlled pre-transplant;
   7. Evidence of active *Mycobacterium tuberculosis* infection and/or smear-positive non-tuberculous mycobacterial infection;
   8. Significant chest wall/spinal deformity expected to cause severe restriction after transplantation;
   9. Inability to adhere to the regimen necessary to preserve the transplant, even with caregiver support;
   10. Class II or III obesity (body mass index ≥ 35.0 kg/m²);
   11. Absence of an adequate or reliable social support system;
   12. Substance abuse or dependence (including tobacco and alcohol) without appropriate risk reduction behaviors, such as meaningful and/or long-term participation in therapy for substance abuse and/or dependence;
CLINICAL POLICY

Lung Transplantation

a. Documentation of abstinence from smoking for 6 months before consideration to be eligible for transplant.

E. Has one of the following disease states and meets its corresponding criteria (not an all-inclusive list):

1. Adult members/enrollees, age ≥ 18:
   a. Interstitial lung disease and any of the following:
      i. Decline in forced vital capacity (FVC) ≥ 10% during 6 months of follow-up (note: a 5% decline is associated with a poorer prognosis and may warrant listing);
      ii. Decline in diffusing capacity of the lung for carbon monoxide (DLCO) ≥ 15% during 6 months of follow-up;
      iii. Desaturation to < 88% or distance < 250 m on 6-minute-walk test (6MWT) or > 50 m decline in 6MWT distance over a 6-month period;
      iv. Pulmonary hypertension on right heart catheterization or 2-dimensional echocardiography;
      v. Hospitalization because of respiratory decline, pneumothorax, or acute exacerbation;
   b. Cystic fibrosis (CF) or other causes of bronchiectasis, and any of the following:
      i. Chronic respiratory failure and one of the following:
         a) With hypoxia alone (partial pressure of oxygen [PaO₂] < 8 kPa or < 60 mm Hg);
         b) With hypercapnia (partial pressure of carbon dioxide [PaCO₂] > 6.6 kPa or > 50 mmHg);
      ii. Long-term non-invasive ventilation therapy;
      iii. Pulmonary hypertension;
      iv. Frequent hospitalization with a clinical trajectory of worsening quality of life and lung function;
      v. Rapid lung function decline;
      vi. World Health Organization (WHO) Functional Class IV.
   c. Chronic obstructive pulmonary disease (COPD), and any of the following:
      i. BODE index (includes BMI, degree of airflow obstruction, degree of dyspnea, and exercise capacity) ≥ 7;
      ii. FEV1 (forced expiratory volume in 1 second) < 15 to 20% of predicted;
      iii. Three or more severe exacerbations during the preceding year;
      iv. At least one severe exacerbation with acute hypercapnic respiratory failure;
      v. Moderate to severe pulmonary hypertension;
   d. Pulmonary vascular diseases and any of the following:
      i. New York Heart Association (NYHA) Functional Class III or IV despite a trial of at least 3 months of combination therapy including prostanoids;
      ii. Cardiac index of < 2 liters/min/m²;
      iii. Mean right atrial pressure > 15 mm Hg;
      iv. 6MWT of < 350 m;
      v. Development of significant hemoptysis, pericardial effusion, or signs of progressive right heart failure (renal insufficiency, increasing bilirubin, brain natriuretic peptide, or recurrent ascites);
   e. Eisenmenger syndrome with pulmonary hypertension despite therapy aimed at avoiding polycythemia, iron deficiency and dehydration, and the associated profound hypoxemia and impaired quality of life;
   f. Lymphangioleiomyomatosis and any of the following:
Clinical Policy
Lung Transplantation

1. Severe impairment in lung function and exercise capacity (e.g., VO2 max <50% predicted);
   ii. Hypoxemia at rest;
   g. Primary lung graft failure or bronchiolitis obliterans.

2. Pediatric members/enrollees, age < 18:
   a. Cystic fibrosis, and any of the following:
      i. Progressive lung disease and disability despite optimal medical therapy;
      ii. FEV1 < 30%;
      iii. Increasingly frequent hospitalizations;
      iv. Hypoxemia, (PaO2 < 8 kPa or < 60 mm Hg);
      v. Hypercapnia, (PaCO2 > 6.6 kPa or > 50 mmHg);
   b. Idiopathic pulmonary arterial hypertension, and any of the following:
      i. NYHA or WHO functional class III or IV despite vasodilator therapy;
      ii. Low exercise tolerance with 6MWT < 350 meters;
      iii. Uncontrolled syncope;
      iv. Hemoptysis;
      v. Right-sided heart failure;
      vi. Failure to respond to vasodilator therapy;
   c. Pulmonary vascular disease and failure to respond to medical management;
   d. Eisenmenger syndrome with pulmonary hypertension despite therapy aimed at
      avoiding polycythemia, iron deficiency and dehydration, and the associated
      profound hypoxemia and impaired quality of life;
   e. Surfactant dysfunction disorders with unrelenting respiratory failure, or progressive
      interstitial lung disease with respiratory insufficiency, unresponsive to medical
      interventions;
   f. Bronchopulmonary dysplasia, and any of the following:
      i. Extended time requiring ventilator support without clinical improvement;
      ii. Pulmonary hypertension unresponsive to oxygen therapy;
      iii. Repeated episodes of respiratory failure without improvement in clinical
      trajectory over time, despite good medical support;
      iv. Progressive pulmonary hypertension;
   g. Diffuse parenchymal lung disease, and any of the following:
      i. Disease progression despite optimal management;
      ii. Poor quality of life;
   h. Primary lung graft failure or bronchiolitis obliterans.

Background
Lung transplantation is an accepted therapy for the management of a range of severe lung
disorders. Single, double, and lobar-lung transplants have all been successful for carefully
selected patients with end-stage pulmonary disease. The most common disease processes for
which lung transplants are performed include COPD, idiopathic pulmonary fibrosis, cystic
fibrosis, pulmonary arterial hypertension, and sarcoidosis.

COPD is one of the most common lung diseases and is the most common indication for lung
transplantation. Chronic bronchitis and emphysema are the two main forms of COPD, both most
commonly caused from smoking. Non-smokers with an alpha-1 antitrypsin deficiency can also
develop emphysema. These conditions are the most common indications for single lung
transplants. Cystic fibrosis, emphysema, and alpha-1 antitrypsin deficiency are the most common
indications for double lung transplant, or sequential replacement of both lungs.
**CLINICAL POLICY**

**Lung Transplantation**

The most common indications for pediatric lung transplants include pulmonary vascular disease, bronchiolitis obliterans, bronchopulmonary dysplasia, graft failure due to viral pneumonitis, and CF.

**Coding Implications**

This clinical policy references Current Procedural Terminology (CPT®). CPT® is a registered trademark of the American Medical Association. All CPT codes and descriptions are copyrighted 2020, American Medical Association. All rights reserved. CPT codes and CPT descriptions are from the current manuals and those included herein are not intended to be all-inclusive and are included for informational purposes only. Codes referenced in this clinical policy are for informational purposes only. Inclusion or exclusion of any codes does not guarantee coverage. Providers should reference the most up-to-date sources of professional coding guidance prior to the submission of claims for reimbursement of covered services.

CLINICAL POLICY
Lung Transplantation

Important Reminder
This clinical policy has been developed by appropriately experienced and licensed health care professionals based on a review and consideration of currently available generally accepted standards of medical practice; peer-reviewed medical literature; government agency/program approval status; evidence-based guidelines and positions of leading national health professional organizations; views of physicians practicing in relevant clinical areas affected by this clinical policy; and other available clinical information. The Health Plan makes no representations and accepts no liability with respect to the content of any external information used or relied upon in developing this clinical policy. This clinical policy is consistent with standards of medical practice current at the time that this clinical policy was approved. “Health Plan” means a health plan that has adopted this clinical policy and that is operated or administered, in whole or in part, by Centene Management Company, LLC, or any of such health plan’s affiliates, as applicable.

The purpose of this clinical policy is to provide a guide to medical necessity, which is a component of the guidelines used to assist in making coverage decisions and administering benefits. It does not constitute a contract or guarantee regarding payment or results. Coverage decisions and the administration of benefits are subject to all terms, conditions, exclusions and limitations of the coverage documents (e.g., evidence of coverage, certificate of coverage, policy, contract of insurance, etc.), as well as to state and federal requirements and applicable Health Plan-level administrative policies and procedures.

This clinical policy is effective as of the date determined by the Health Plan. The date of posting may not be the effective date of this clinical policy. This clinical policy may be subject to applicable legal and regulatory requirements relating to provider notification. If there is a discrepancy between the effective date of this clinical policy and any applicable legal or regulatory requirement, the requirements of law and regulation shall govern. The Health Plan retains the right to change, amend or withdraw this clinical policy, and additional clinical policies may be developed and adopted as needed, at any time.

This clinical policy does not constitute medical advice, medical treatment or medical care. It is not intended to dictate to providers how to practice medicine. Providers are expected to exercise professional medical judgment in providing the most appropriate care, and are solely responsible for the medical advice and treatment of members/enrollees. This clinical policy is not intended to recommend treatment for members/enrollees. Members/enrollees should consult with their treating physician in connection with diagnosis and treatment decisions.

Providers referred to in this clinical policy are independent contractors who exercise independent
This clinical policy is the property of the Health Plan. Unauthorized copying, use, and distribution of this clinical policy or any information contained herein are strictly prohibited. Providers, members/enrollees and their representatives are bound to the terms and conditions expressed herein through the terms of their contracts. Where no such contract exists, providers, members/enrollees and their representatives agree to be bound by such terms and conditions by providing services to members/enrollees and/or submitting claims for payment for such services.

**Note: For Medicaid members/enrollees**, when state Medicaid coverage provisions conflict with the coverage provisions in this clinical policy, state Medicaid coverage provisions take precedence. Please refer to the state Medicaid manual for any coverage provisions pertaining to this clinical policy.

**Note: For Medicare members/enrollees**, to ensure consistency with the Medicare National Coverage Determinations (NCD) and Local Coverage Determinations (LCD), all applicable NCDs, LCDs, and Medicare Coverage Articles should be reviewed prior to applying the criteria set forth in this clinical policy. Refer to the CMS website at [http://www.cms.gov](http://www.cms.gov) for additional information.
